

ATTENZIONE!

Leggere attentamente il foglio *'Informazioni importanti'* prima di procedere.

WARNING!

Carefully read the *'Important informations'* sheet before starting.

EN Remove the following original parts (Fig. 1): rear rack, plastic side covers, exhaust cover, and finally the passenger foot pegs on both sides.

Proceed with installing the frames starting from plates X (highlighted in green): reinstall the passenger foot pegs, placing the plates between the pegs and their original supports, without tightening the screws.

Position the frames on the motorcycle and insert the screws as indicated by the letters in the diagram:

A – place the rear rack on top of the frames and reinstall the 4 original screws.

B – M8x20 screws supplied in the kit.

C – M8x20 screws with washers and M8 nuts.

At this point, tighten all screws and reinstall the original components, except for the black plastic covers.

IT Rimuovere le seguenti parti originali (fig.1): portapacchi, cover laterali in plastica, cover marmitta e infine pedane passeggero da entrambi i lati.

Procedere all'installazione dei telai partendo dai piastrini X (evidenziati in verde): rimontare le pedane passeggero interponendo i piastrini fra le pedane e i relativi supporti originali, **senza stringere le viti**.

Posizionare i telai sulla moto e inserire le viti come indicato dalle lettere nello schema:

A - posizionare il portapacchi sopra i telai, e reinserire le 4 viti originali.

B - viti M8x20 fornite nel kit

C - viti M8x20 con rondelle e dadi M8

A questo punto, stringere tutte le viti e rimontare i componenti originali, ad eccezione delle cover nere in plastica.
